

# Modernizing Telecommunications with 5G Powered AI Solutions

## *Get to Results Faster*

Telecom providers need AI now, but struggle to integrate at scale across a range of environments and applications. See the impact of your AI projects in weeks, not months or years. Modzy is the single platform for all your AI use cases - in the cloud, on-prem, hybrid, air gap, or edge.

## *Customer Case Study*

Our customers rely on Modzy to support a wide range of business use cases. One U.S. telecom provider is using Modzy to enable its development teams and partner ecosystem to rapidly deploy, run, and monitor AI/ML models across their extensive 5G network. This means the company's business users will be able to access ML-enabled business solutions like cyber security, fleet management, asset tracking, IoT, and more directly from their service provider.

### *Results*

**15X**

Faster AI model deployment

**\$800K**

Avg. cloud cost savings

**20X**

Faster AI solution development

### *Partners*

 **nvidia.**

 **Hewlett Packard Enterprise**

**intel.**

 **snowflake**

# Run ML Workloads Anywhere - even at the Edge

Power your AI with Modzy, a platform for integrating ML/AI for IoT and edge solutions. Deploy your models once, use APIs and pre-built connectors to deliver ML capability anywhere, and run at-scale to enable real-time analytics with better networking, low latency, and increased security.

## Features

**Fast Development**

**API Integration**

**Deploy Anywhere**

**Infrastructure Autoscaling**

**Monitoring & Governance**

**Enterprise Security**

## Our Telco Customers Use Modzy to Power Solutions like:

### ***New Products & Services***

Generate new revenue streams through AI-enabled security, fleet management, asset tracking, IoT solutions, and more.

### ***Predictive Maintenance***

Proactively manage issues with communications equipment, like cell towers, MEC centers, power lines, data servers, and more.

### ***Network Optimization***

Improve network forecasting, capacity planning, and security to automatically optimize network quality based on real-time traffic information.

### ***Customer Support***

Enhance customer service experiences and expand personalized offerings with conversational AI solutions.
